| <p>Bareroot digging season starts in November and runs through March. Trees are packed every few days and are ready, in the cooler for prime planting season, generally Feb 15 to April 1.</p> <p>Plugs and pots are ready almost year around. **Planting after April 1 is by election of the grower. Trees planted after April 15 are not guaranteed.**</p> <p>If planting after April 15 is un-avoidable, water and mulching is suggested. Watering throughout the first summer may be required for very late plantings.</p> |                                |               |         |           |           |      |             |

## Fall 2026 - Spring 2027 Options

| Seed Source                                                | In house code | Elevation | Orchard / Native | Gain   | Notes                                                                                                                                                                                                                                                                                                                   |
|------------------------------------------------------------|---------------|-----------|------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Douglas Fir (5)<br>051/052/053 N Oregon Coast              | 1205          | 1500      | Timber Orchard   | Medium | Although untested, the N Oregon Coast is adjacent to some of the best native Puget Sound seed lots in the world and for that reason, growers have for many years relied on these sources when options are few. Production appears to be reliable.                                                                       |
| Douglas Fir 061<br>Central OR Coast, Depoe Bay to Coos Bay | 1300          | 1500      | Native           | None   | Untested for Christmas trees. The Puget Sound and North Oregon Coast are well known and appear to be good options, have been heavily used. Many growers are using this coastal source as a logical alternate when better options aren't available.                                                                      |
| Douglas Fir 072,<br>South Coast Coos Bay to California     | 1196          | 1500      | Native           | None   | Untested for Christmas trees, the S Coast is used by several Californian growers but not usually used for Pacif NW growers who consider it too far out of the known zones. The 72 plugs are about the size of an egg, used for shallow rocky soils, field transplants for P-1 production or potted trees.               |
| Douglas Fir 251<br>Dallas                                  | 1229          | <2000     | Timber Forest    | Elite  | The underlying 251 seed lot is a known work horse for both timber and Christmas trees. This orchard achieved highest forestry gains possible and received the rarely awarded Elite level of improvement. Goal information is proprietary but typical targets are improved disease resistance, fast and straight growth. |
| Douglas Fir 251                                            | 1299          | 1500      | Native           | None   | Last of old reliable seed lot from native forest, (North end of Will valley around Newburg to Dallas), until new collections are provided.                                                                                                                                                                              |
| Douglas Fir 251 (6)<br>Coast/Burnt Woods                   | 1224          | 1000      | Timber Orchard   | Medium | New Zone (6) is a combo of 251 and 252. Near the Coast Range Crest, it borders the 051/052/053 seed zone now collectively called (5) . All areas of new zones (5) and (6) are heavily and successfully used for Christmas trees                                                                                         |
| Douglas Fir (8) Will Valley                                | 1340          | 2000      | Timber Orchards  | None   | New Zone 8 is a combo of 261 and 262. Both are heavily used for Christmas trees.                                                                                                                                                                                                                                        |

|                                   |               |       |                                        |          |                                                                                                                                                                                                                                                                                                             |
|-----------------------------------|---------------|-------|----------------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Douglas Fir 251<br>Valley Mix Low | 1341          | <2000 | Timber<br>Orchards                     | Medium   | Mix of North end of Will Valley (6) and (8) (Mollalla to Vernonia). Both are heavily used for Christmas trees. Styro 5 are usually around 12", Stry 8 are a new option, as requested for a slightly bigger, stronger tree, priced a bit higher due to fewer per house.                                      |
| Douglas Fir Will<br>Valley Mix    | 1091,<br>1092 | <2500 | Timber<br>Orchards                     | Medium   | A timber orchard for lower Will Valley with Vancouver Island trees from an old Christmas tree farm. The VI trees were intentionally left by orchard managers who saw the inherent high quality wood characteristics. Although intended for S Oregon, the timber company considers the cross a huge success. |
| Douglas Fir<br>Vancouver Island   | 1140          | <2000 | Christma<br>s Native                   | None     | Vancouver Island (VI) is considered one of the top three sources, along with adjacent Powell River and Taxada Island. Seed is always in short supply and seed prices are increasing, when available at all.                                                                                                 |
| Douglas Fir BTF                   | 1375          | <2000 | Christma<br>s Tree<br>Orchard          | Untested | An in-house orchard mix of Val 3, DG9 and Dixie Mt selected for upright branching, narrow forms and dense foliage. Some could have been from VI origin, Dixie Mt was 251 origin                                                                                                                             |
| Noble Fir 053                     |               |       |                                        |          | Fast growing and popular with commercial growers. Seed source is very limited. Order very early                                                                                                                                                                                                             |
| Noble Fir 251                     | 1467,<br>1468 |       | Christma<br>s Tree<br>Native<br>Forest | None     | The adjacent to 053, on the valley side of Fanno Ridge. Possibly a bit tighter 251.                                                                                                                                                                                                                         |
| Noble Fir 252                     | 1469          |       | Christma<br>s Tree<br>Native<br>Forest | None     | South of 053 and 251, the seed is collected specifically from Mary's Peak. Rated #1 for quality in the original PNWCTA tests. Mary's Peak is very good for minimal cultering or bough production.                                                                                                           |
| Noble Fir 440                     |               |       | Christma<br>s Tree<br>Native<br>Forest |          | Mt St Helens One of the few good Cascade sources. Medium fast and uniform.                                                                                                                                                                                                                                  |

#### Douglas fir and Noble Fir Seed Source Information

|                       |      |  |                                |             |                                                                                                                                                                                                                                                                                                          |
|-----------------------|------|--|--------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Noble Fir 452         |      |  | Christmas Tree Native Forest   |             | Black Rock One of the other Cascade sources. A fast growing and dependable seed source. A favorite by many, even when there are several to choose from.                                                                                                                                                  |
| Noble Fir Silkeborg   |      |  | Danish Orchard Christmas Trees |             | The Danish orchards are generally slower, more blue in foliage and very good quality for boughs or table tops. Good for premium or natural style production where a lot of culturing isn't desirable.                                                                                                    |
| Noble Fir Overgaard   |      |  | Danish Orchard Christmas Trees |             | Tested and sought after source in Denmark where quality is considered more important than any other feature. Described as gray-blue or gray-white. A new seed source here. Generally Danish markets prefer trees that are naturally produced and these were bred for minimum trimming during production. |
| Noble Fir Horning     |      |  | BLM Horning Orchard            | Medium Gain | Coastal seed lot, target goals are unclear. Suitable for elevations up to 4500', which is normal for most Christmas tree seed stock.                                                                                                                                                                     |
| Noble Fir Silver Mt   |      |  | Private Orchard Closed         | Elite Gain  | Origin was top rated Sietz/Riley/Fanno. Best in class trees were hand selected for cross breeding, this top rated orchard is now closed.                                                                                                                                                                 |
| Noble Fir Orchard Run | 1460 |  | Private Orchard Closed         |             | Top selection in orchards and under observation. Mix of parents.                                                                                                                                                                                                                                         |

| DIY Option                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | A variety of ideas for DIY presentation | Custom Bag & Card  | Potted, gift box   |

Planted in 1962, rogued for best Christmas trees criteria was late and uniform flush, needle density and internodal branches & buds. Altitude is under 75'. Placed overall 6th out of 35 in trial, best of the Ambrolauri group in the trial. | None     |
| <b>Nordman Fir,<br/>Dramstrup</b>             | <b>Comparative ratings not currently available</b> |            |            |          |           |          | Believed to be a Tvetsted Silkeborg (Barjomi) pool, the second generation orchard is from 10 clones of proven needle retention and form. Uniformity of shape is noted, thought to be a bit faster growing than some. Four locations tested by Kbh University rated at 40% higher value per field than Ambrolaurie.            | None     |
| <b>Nordman Fir,<br/>Lundbygaard 1000</b>      | <b>10</b>                                          | <b>8,4</b> | <b>8,7</b> | <b>6</b> | <b>10</b> | <b>8</b> | A Tversted pool (Silkeborg, Barjomi) group, scored best for shape, had mixed ratings in rate of growth and branch angle over two tests. From an orchard of 12 selected clones. Has marginally later bud break than Ambrolauri. Narrower form and proven needle retention. Top performer overall in these two tests.           | None     |
| <b>Nordman Fir<br/>Knuthenborg</b>            | <b>8</b>                                           | <b>6</b>   | <b>7</b>   | <b>6</b> | <b>10</b> | <b>8</b> |                                                                                                                                                                                                                                                                                                                               | 3-0, 3-1 |

## 2026 and 2027 Options

| Seed Source                                                      | In house code | Elevation | Orchard / Native | Gain   | Notes                                                                                                                                                                                                                                                                                                                   | Formats 2027  |
|------------------------------------------------------------------|---------------|-----------|------------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| Douglas Fir (5)<br>051/052/053 N<br>Oregon Coast                 | 1205          | 1500      | Timber Orchard   | Medium | Although untested, the N Oregon Coast is adjacent to some of the best native Puget Sound seed lots in the world and for that reason, growers have for many years relied on these sources when options are few. Production appears to be reliable.                                                                       | Styro 5, P-1  |
| Douglas Fir 061<br>Central OR<br>Coast, Depoe Bay<br>to Coos Bay | 1300          | 1500      | Native           | None   | Untested for Christmas trees. The Puget Sound and North Oregon Coast are well known and appear to be good options, have been heavily used. Many growers are using this coastal source as a logical alternate when better options aren't available.                                                                      | 2-0           |
| Douglas Fir 072,<br>South Coast Coos<br>Bay to California        | 1196          | 1500      | Native           | None   | Untested for Christmas trees, the S Coast is used by several Californian growers but not usually used for Pacif NW growers who consider it too far out of the known zones. The 72 plugs are about the size of an egg, used for shallow rocky soils, field transplants for P-1 production or potted trees.               | 72 plugs, P-1 |
| Douglas Fir 251<br>Dallas                                        | 1229          | <2000     | Timber Forest    | Elite  | The underlying 251 seed lot is a known work horse for both timber and Christmas trees. This orchard achieved highest forestry gains possible and received the rarely awarded Elite level of improvement. Goal information is proprietary but typical targets are improved disease resistance, fast and straight growth. | Styro 8, P-1  |
| Douglas Fir 251                                                  | 1299          | 1500      | Native           | None   | Last of old reliable seed lot from native forest, (North end of Will valley around Newburg to Dallas), until new collections are provided.                                                                                                                                                                              | Styro 8, P-1  |
| Douglas Fir 251<br>(6) Coast/Burnt<br>Woods                      | 1224          | 1000      | Timber Orchard   | Medium | New Zone (6) is a combo of 251 and 252. Near the Coast Range Crest, it borders the 051/052/053 seed zone now collectively called (5) . All areas of new zones (5) and (6) are heavily and successfully used for Christmas trees                                                                                         | Styro 8, P-1  |
| Douglas Fir (8) Will<br>Valley                                   | 1340          | 2000      | Timber Orchards  | None   | New Zone 8 is a combo of 261 and 262. Both are heavily used for Christmas trees.                                                                                                                                                                                                                                        | 2-0           |

|                                   |               |       |                                        |          |                                                                                                                                                                                                                                                                                                             |                         |
|-----------------------------------|---------------|-------|----------------------------------------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| Douglas Fir 251<br>Valley Mix Low | 1341          | <2000 | Timber<br>Orchards                     | Medium   | Mix of North end of Will Valley (6) and (8) (Mollalla to Vernonia). Both are heavily used for Christmas trees. Styro 5 are usually around 12", Stry 8 are a new option, as requested for a slightly bigger, stronger tree, priced a bit higher due to fewer per house.                                      | Styro 5<br>or 8,<br>2-0 |
| Douglas Fir Will<br>Valley Mix    | 1091,<br>1092 | <2500 | Timber<br>Orchards                     | Medium   | A timber orchard for lower Will Valley with Vancouver Island trees from an old Christmas tree farm. The VI trees were intentionally left by orchard managers who saw the inherent high quality wood characteristics. Although intended for S Oregon, the timber company considers the cross a huge success. | P-1                     |
| Douglas Fir<br>Vancouver Island   | 1140          | <2000 | Christma<br>s Native                   | None     | Vancouver Island (VI) is considered one of the top three sources, along with adjacent Powell River and Taxada Island. Seed is always in short supply and seed prices are increasing, when available at all.                                                                                                 | Styro 8,<br>P-1         |
| Douglas Fir BTF                   | 1375          | <2000 | Christma<br>s Tree<br>Orchard          | Untested | An in-house orchard mix of Val 3, DG9 and Dixie Mt selected for upright branching, narrow forms and dense foliage. Some could have been from VI origin, Dixie Mt was 251 origin                                                                                                                             | Styro 5                 |
| Noble Fir 053                     |               |       |                                        |          | Fast growing and popular with commercial growers. Seed source is very limited. Order very early                                                                                                                                                                                                             | Styro 8                 |
| Noble Fir 251                     | 1467,<br>1468 |       | Christma<br>s Tree<br>Native<br>Forest | None     | The adjacent to 053, on the valley side of Fanno Ridge. Possibly a bit tighter 251.                                                                                                                                                                                                                         | 2-1                     |
| Noble Fir 252                     | 1469          |       | Christma<br>s Tree<br>Native<br>Forest | None     | South of 053 and 251, the seed is collected specifically from Mary's Peak. Rated #1 for quality in the original PNWCTA tests. Mary's Peak is very good for minimal cultering or bough production.                                                                                                           | 2-1                     |
| Noble Fir 440                     |               |       | Christma<br>s Tree<br>Native<br>Forest |          | Mt St Helens One of the few good Cascade sources. Medium fast and uniform.                                                                                                                                                                                                                                  | 2-1                     |

#### Douglas fir and Noble Fir Seed Source Information

|                       |      |  |                                |             |                                                                                                                                                                                                                                                                                                          |               |
|-----------------------|------|--|--------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| Noble Fir 452         |      |  | Christmas Tree Native Forest   |             | Black Rock One of the other Cascade sources. A fast growing and dependable seed source. A favorite by many, even when there are several to choose from.                                                                                                                                                  | 2-1           |
| Noble Fir Silkeborg   |      |  | Danish Orchard Christmas Trees |             | The Danish orchards are generally slower, more blue in foliage and very good quality for boughs or table tops. Good for premium or natural style production where a lot of culturing isn't desirable.                                                                                                    | 2-1           |
| Noble Fir Overgaard   |      |  | Danish Orchard Christmas Trees |             | Tested and sought after source in Denmark where quality is considered more important than any other feature. Described as gray-blue or gray-white. A new seed source here. Generally Danish markets prefer trees that are naturally produced and these were bred for minimum trimming during production. | 2-1           |
| Noble Fir Horning     |      |  | BLM Horning Orchard            | Medium Gain | Coastal seed lot, target goals are unclear. Suitable for elevations up to 4500', which is normal for most Christmas tree seed stock.                                                                                                                                                                     | 2-0           |
| Noble Fir Silver Mt   |      |  | Private Orchard Closed         | Elite Gain  | Origin was top rated Sietz/Riley/Fanno. Best in class trees were hand selected for cross breeding, this top rated orchard is now closed.                                                                                                                                                                 | Band Pots, #1 |
| Noble Fir Orchard Run | 1460 |  | Private Orchard Closed         |             | Top selection in orchards and under observation. Mix of parents.                                                                                                                                                                                                                                         | Band Pots, #1 |

|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------|
| Plug                             | Any plant grown in controlled space (often but not always a greenhouse) in a tray with separate cells for each plant. The plant is popped out of the cell for shipping and retains a bit of soil forming a mini root ball.                                                                                            | Any plug is easier to handle than bare root                                  |
| 72                               | 4 cu, Egg sized, best suited for transplanting for P-1, potting or rocky shallow soil.                                                                                                                                                                                                                                | #1 or #2 container, transplants, guest gifts for memorials, weddings, events |
| Styro 5                          | 5 cu, most efficient with space, lower cost by .02 - .03, most plants are around 6"-12".                                                                                                                                                                                                                              | Good field conditions                                                        |
| Styro 8                          | 8 cu, 43% larger root ball, added for 2026 by popular demand for larger trees. Most plants are 8"-15"                                                                                                                                                                                                                 | Average field conditions                                                     |
| Styro 15                         | 15 cu, Used for 2yr transplants, limited quantities                                                                                                                                                                                                                                                                   | Field or #2 Container                                                        |
| 2-0                              | Two years old. Seed sown directly to field bed, field grown, shipped bare root.                                                                                                                                                                                                                                       | Best value for size, good when budget is a factor                            |
| 3-0                              | Three years old. Seed sown directly to field bed, field grown, shipped bare root.                                                                                                                                                                                                                                     | The European Firs need three years in the field                              |
| P-1                              | Two yr old. One year in plug tray in greenhouse, one year in field. Shipped bare root.                                                                                                                                                                                                                                | Best for difficult conditions or for replacements existing field             |
| 2-1                              | Three years old. Two years in field, dug, root pruned, replanted in field. Shipped bare root.                                                                                                                                                                                                                         | Where big trees are needed for short leases or early crop                    |
| Anderson Band                    | Plastic pots with bottoms mostly absent, a simple cross band hold potting mix in. 2 7/8" square x 5 1/2" deep. Occasionally 3 5/8" x 6" deep are available. Used for conifers that require excellent drainage.                                                                                                        | For planting windows outside of norms or fewer trees are needed              |
| #1, #2, #5                       | 1, 2 or 5 gallons (approximately). May be ordered in small quantities, posted price is for over 25. Purchases of containers are aggregated for best price. Good option when only very small amounts or much larger trees are needed. Inquire for retail pricing of amounts of 1 to 25. Information on Sizes & Formats | Year around planting options, much bigger, more developed forms              |
